01 Options

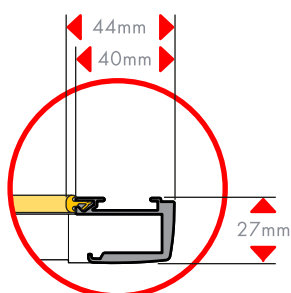

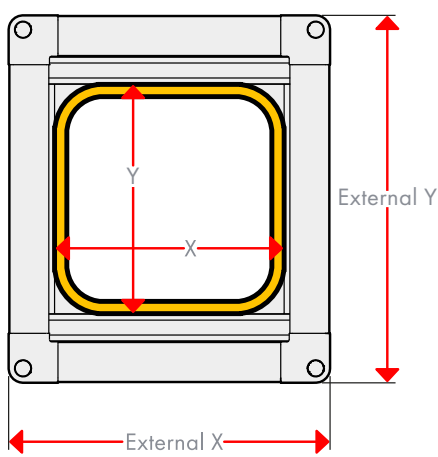

An optional seal or liner is available for the SEASCREEN Pleated.

SEASCREEN Pleated

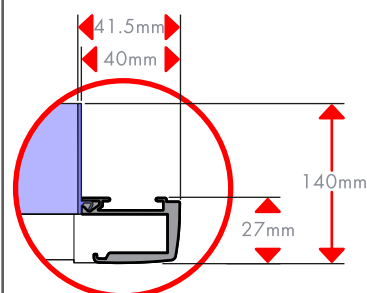

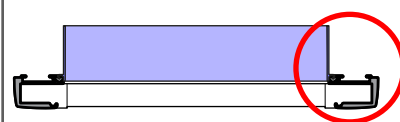

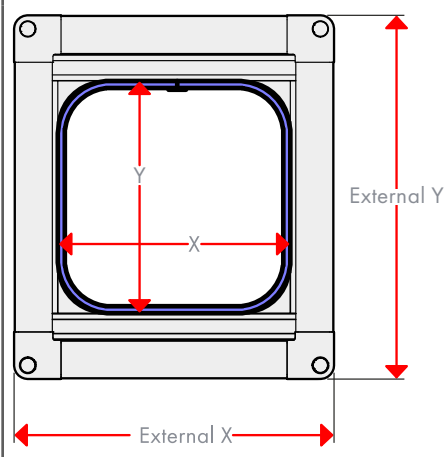

See section 2 for drawing of a size 60 blind.

SEASCREEN Pleated with seal

A blind with a seal will be the same overall size as a blind without a seal. The X and Y measurements remain the same. See section 3 for drawing of a size 60 blind with a seal.

SEASCREEN Pleated with liner

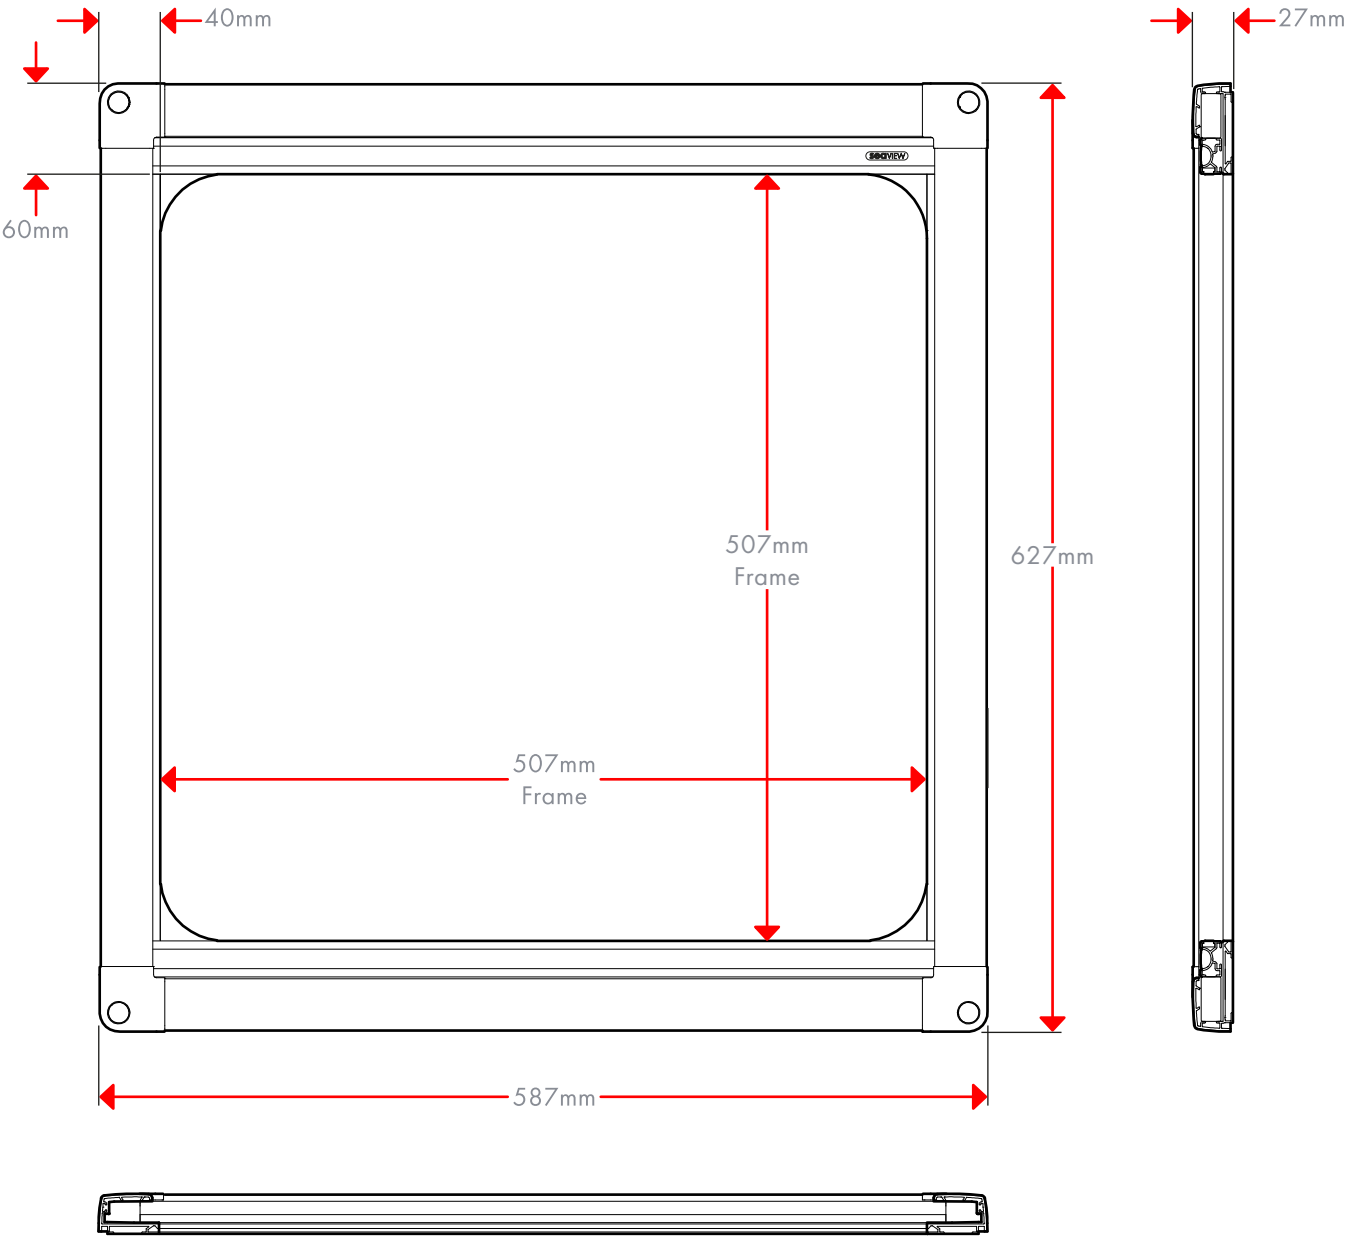

A blind with a liner will be 3mm larger overall. The frame X and Y measurements increase by 3mm to allow for the liner. See section 4 for drawing of a size 60 blind with a liner.

NOTE

When the Frame Y is over 500mm the stacked fabrics will not be completely hidden within the head rails and so the crossbar will intrude on the opening. The amount of intrusion is different for the Flyscreen and the Blackout due to the differing fabric thicknesses. This information can be confirmed when ordering however the table in section 5 gives an indication of the amount of intrusion.

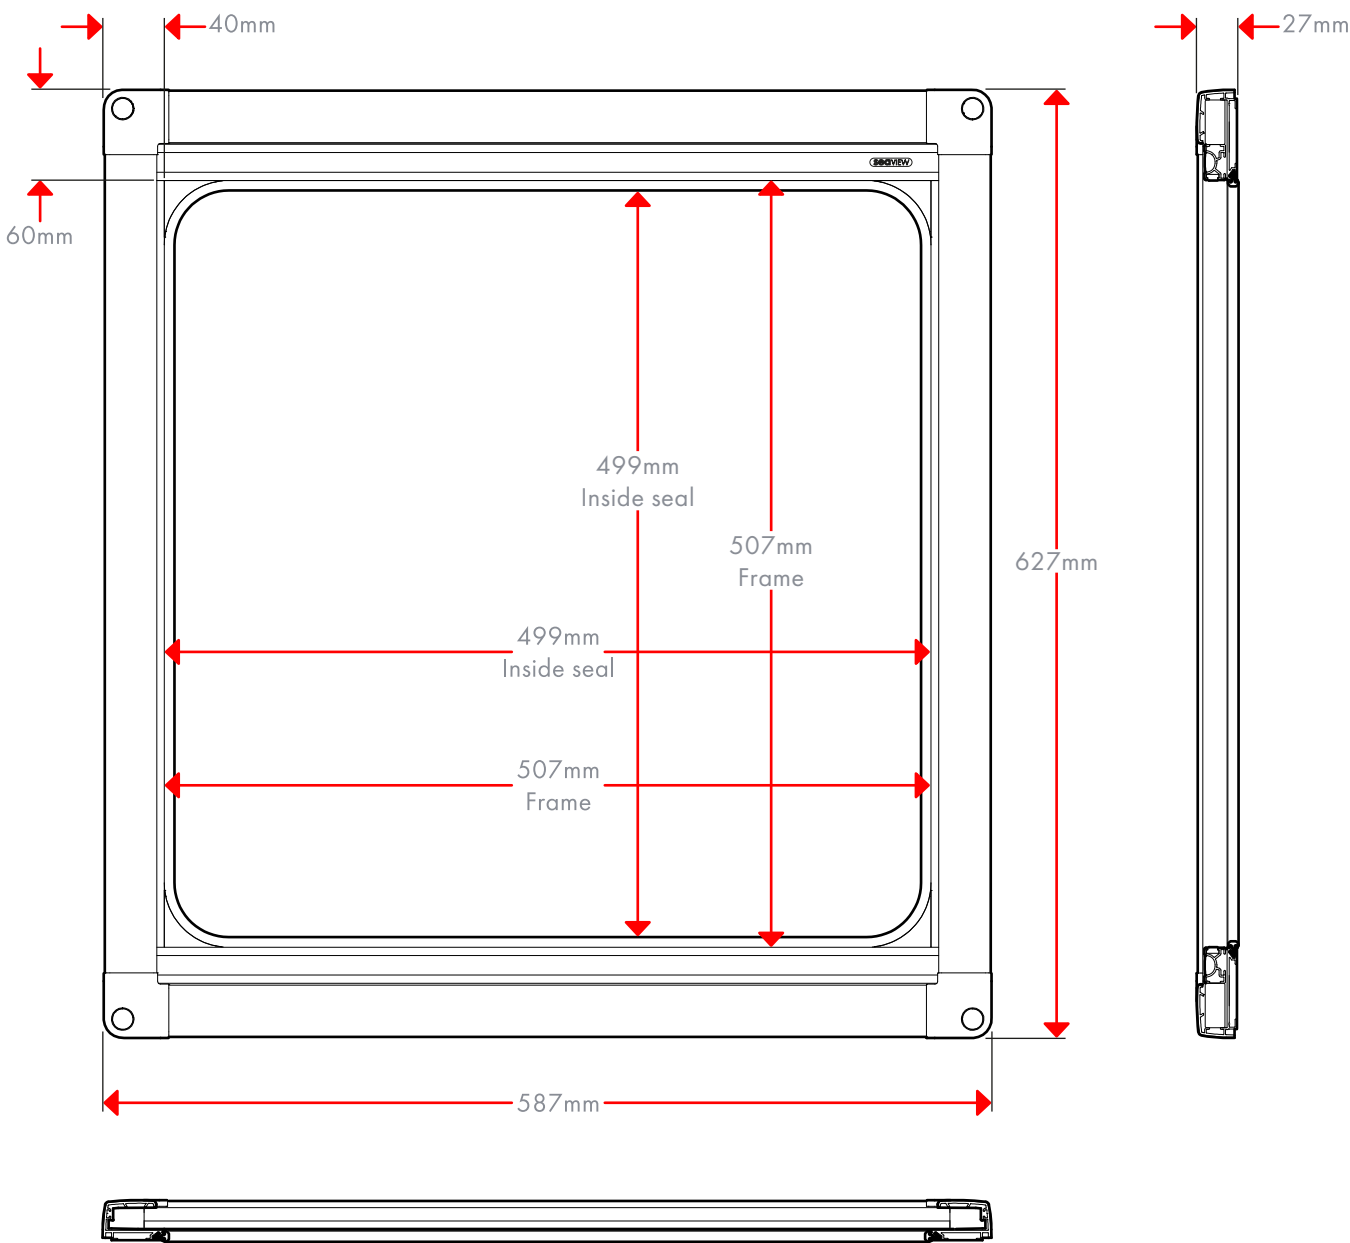

02 SEASCREEN Pleated

Drawing below shows an example of a SEASCREEN Pleated Size 60 with no seal or liner;

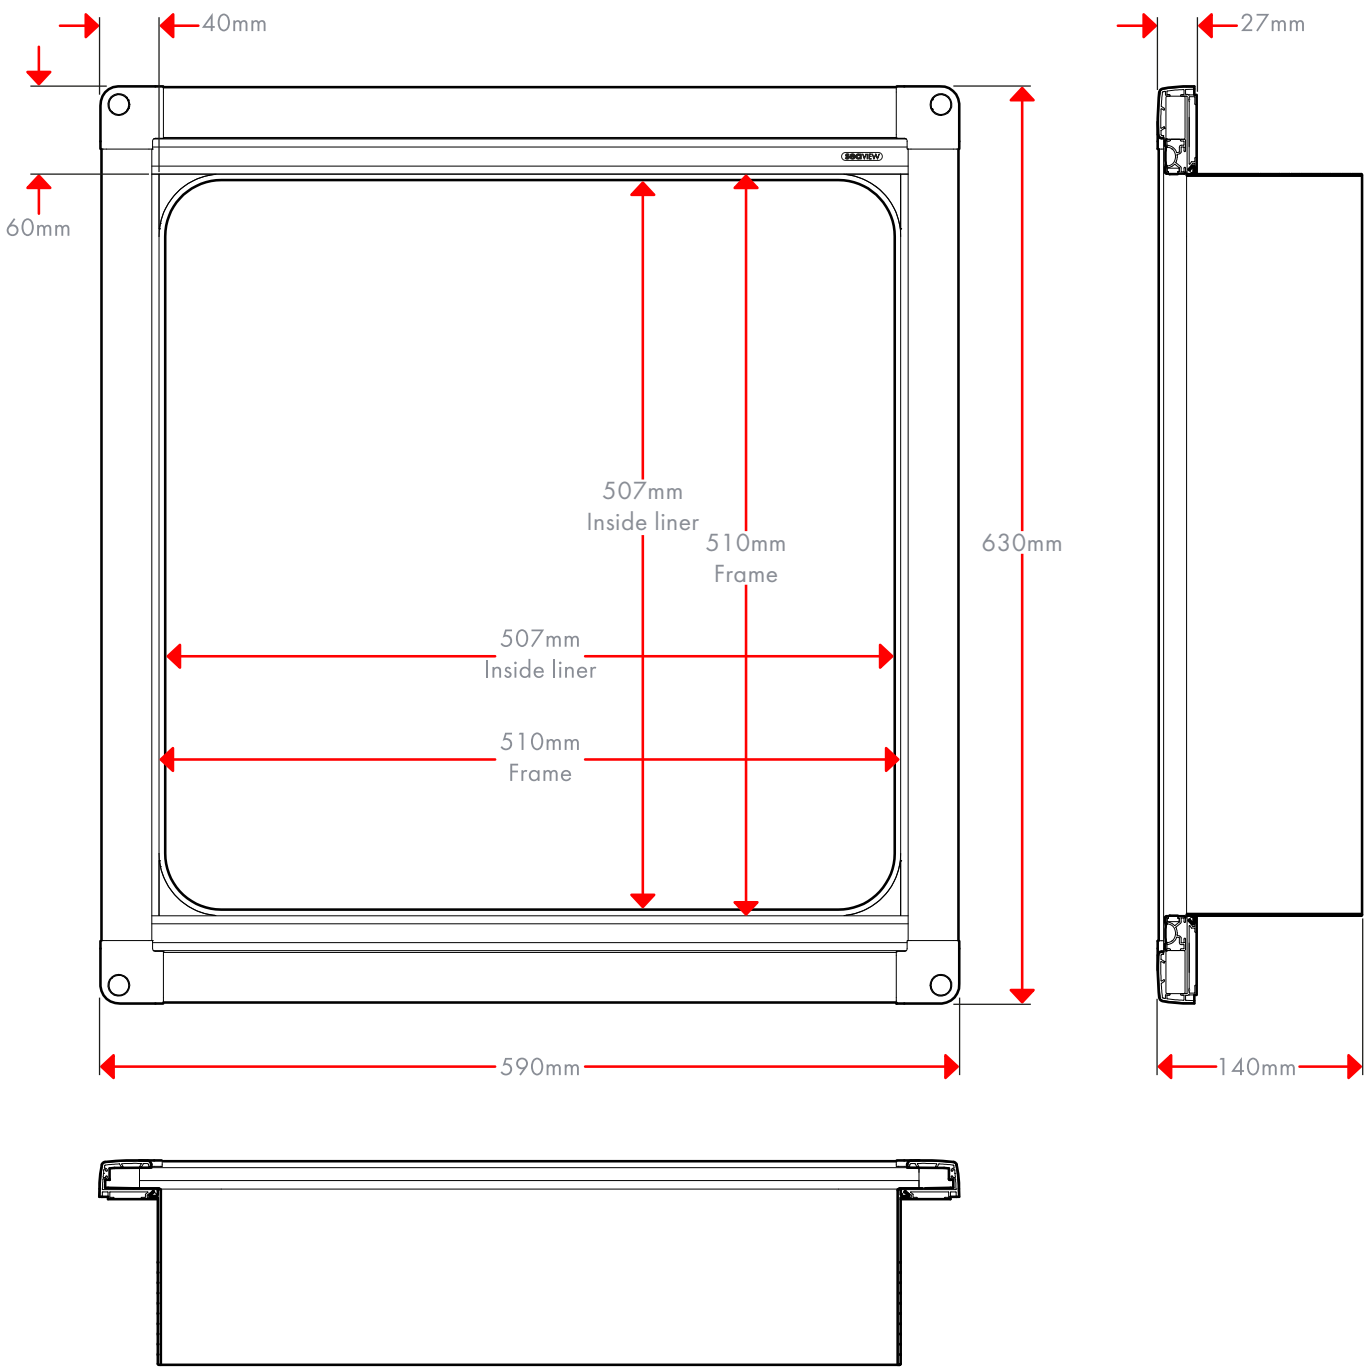

03 SEASCREEN Pleated with seal

Drawing below shows an example of a SEASCREEN Pleated Size 60 with a seal;

04 SEASCREEN Pleated with liner

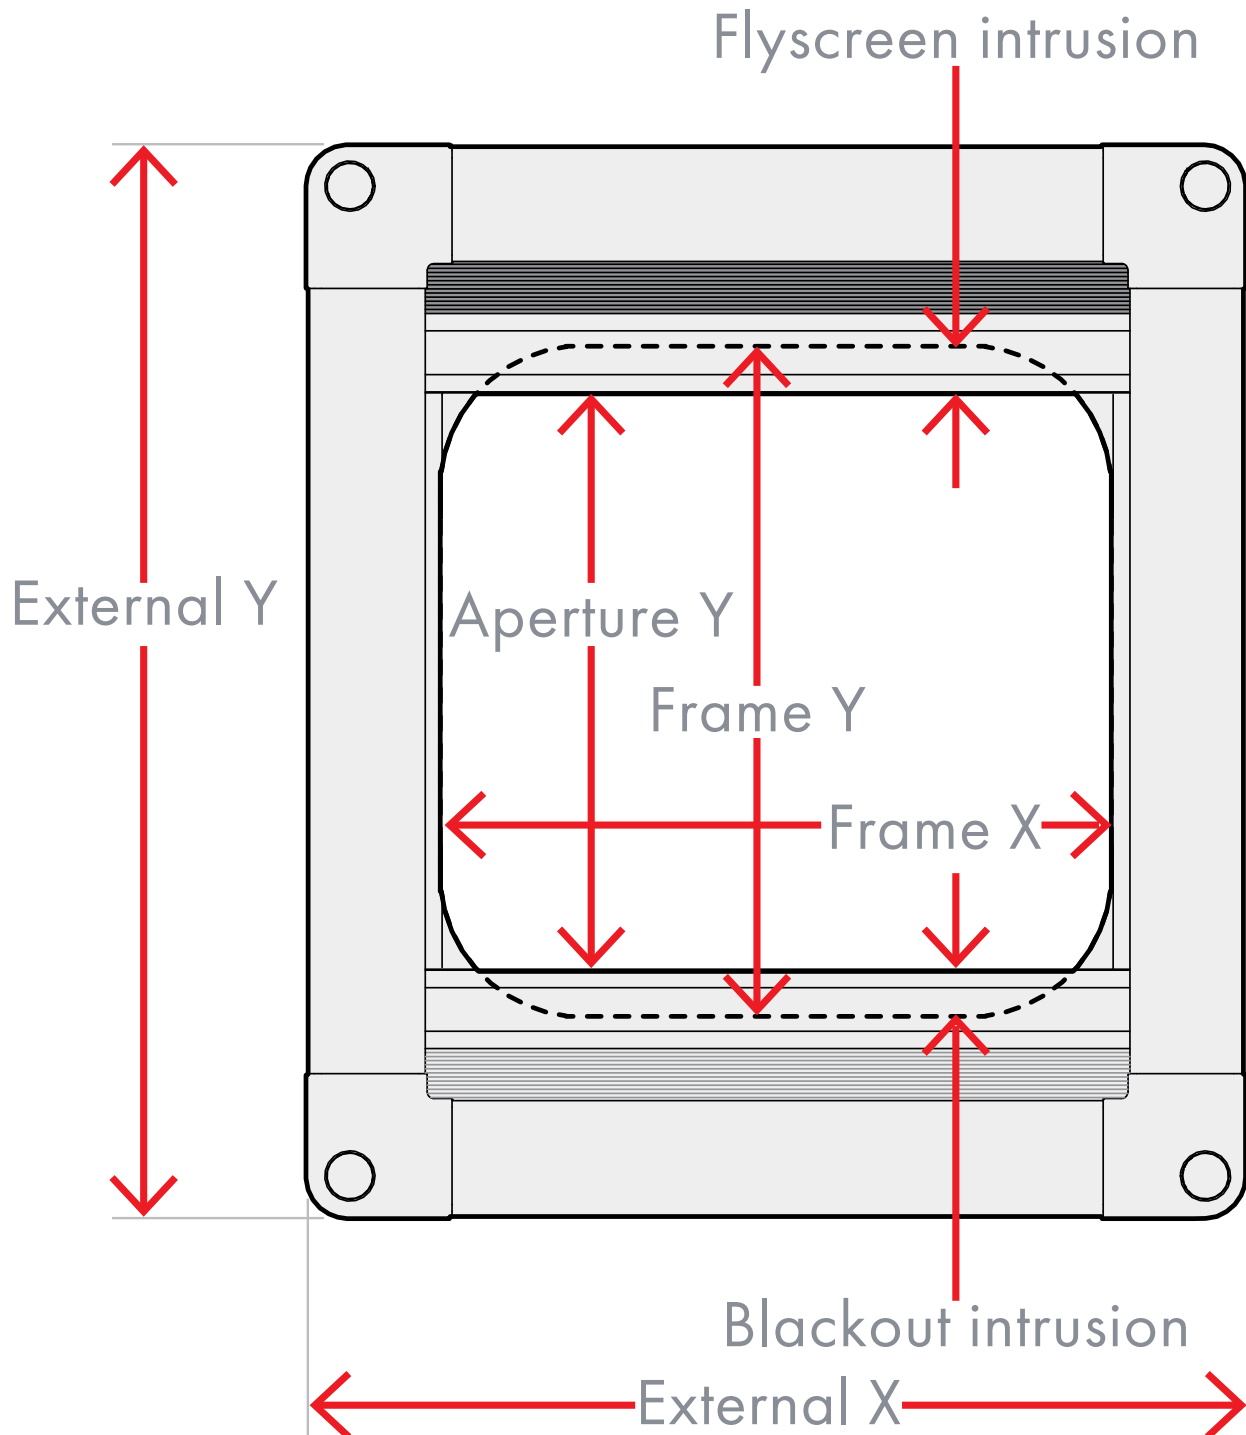

Drawing below shows an example of a SEASCREEN Pleated Size 60 with no seal or liner;

05 Intrusion

Square blinds with an aperture up to 507 x 507 will not have any intrusion. A blind with a width over 507 will have some intrusion (depending on the drop).

For confirmation of the amount of intrusion for a specific size blind send an Enquiry Form to SEAVIEW Blinds.
